

The Navigation Controllers tutorial will teach you how to implement a navigation controller in your iPhone® or iPad® app. It explains how to display a view controller's view inside a navigation controller; how to make the status bar, navigation bar, and toolbar translucent and expand the underlying view to fill the screen; how to transition from one level of detail to another; how to deal with memory warnings; and how to implement navigation bars and toolbars with titles, prompts, buttons, images, and views. The tutorial includes the code for a sample app and a link to the sample app Xcode project, which illustrates the subjects discussed in the tutorial.
